

**NORTH SUBURBAN EMERGENCY MEDICAL CONSORTIUM  
CLINICAL POLICY**

**TITLE:** Prehospital Thrombolytic Checklist

**APPROVED BY:**   
Michael S. Erdos, MD, Medical Director

  
Sharon A. Romano, RN, EMT-P, Coordinator

**PURPOSE:** It has been established that a prehospital 12-lead ECG coupled with a checklist to determine the eligibility for thrombolytic therapy can reduce the door-to-drug time by as much as 60 minutes.

**POLICY:** When the clinical and ECG evidence suggest that an infarction is present and the patient appears to be a potential candidate for Thrombolytic therapy a "Prehospital Thrombolytic Checklist" should be completed and attached to the patient's ALS run report.
